

# JERIN JOHN

Senior Frontend Engineer | React.js Specialist | Full-Stack Developer

+1 (250) 879-2186 • john.jerin2@gmail.com • Toronto, ON, Canada • [LinkedIn](#) • [GitHub](#)

## PROFESSIONAL SUMMARY

Results-driven Senior Frontend Engineer with 14+ years of experience architecting and delivering large-scale React.js applications across insurance, airline, healthcare, and fintech sectors. Deep expertise in modern React practices — hooks, functional components, Context API, and Redux — paired with strong TypeScript proficiency and a passion for performance optimization (memoization, lazy loading, code splitting). Proven track record of leading cross-functional agile teams, mentoring junior developers, and championing accessible, user-centric design principles. Adept with Next.js (SSR/SSG), comprehensive testing strategies (Jest, React Testing Library, Cypress), and cloud-native CI/CD pipelines on AWS.

## CORE COMPETENCIES

Large-Scale React Architecture • React Hooks & Functional Components • TypeScript • Performance Optimization • State Management (Redux / Context API / Zustand) • Next.js (SSR / SSG) • Testing (Jest / RTL / Cypress) • Webpack & Babel • Accessibility (WCAG / ARIA) • REST API Integration • CI/CD Pipelines • Agile / Scrum • UX-Driven Development • Mentoring & Team Leadership • Microservices Architecture • AWS Cloud Infrastructure

## TECHNICAL SKILLS

|                |                                                                                                                                                                                                      |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Frontend       | React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Context API, React Hooks, Zustand, Material UI, Ant Design, Bootstrap, Styled Components, HTML5, CSS3, SCSS, Web Components, Webpack, Babel |
| Testing        | Jest, React Testing Library, Cypress, Enzyme, Mocha, Selenium, Playwright                                                                                                                            |
| Backend        | Node.js, Express.js, Java Spring Boot, Python Flask, GraphQL, Apollo, RESTful APIs, WebSockets, ASP.NET, .NET                                                                                        |
| Cloud & DevOps | AWS (EC2, S3, Lambda, RDS, SQS, SNS, CloudFront, CloudWatch), Docker, CircleCI, Jenkins, GitLab CI/CD, JFrog Artifactory                                                                             |
| Databases      | PostgreSQL, SQL Server, MySQL, MongoDB, DynamoDB, Redis                                                                                                                                              |
| Tools          | Git, GitHub, Bitbucket, Jira, Figma, InVision, SonarQube, Splunk, Kibana, Keycloak (SSO/JWT), Cursor, GitHub Copilot                                                                                 |

## PROFESSIONAL EXPERIENCE

**Frontend Engineer (Contract)** | [Intuit](#) | Toronto, ON, Canada

Jan 2026 – Apr 2026

- Architected and developed large-scale React.js applications using TypeScript, hooks, and functional components for TurboTax, supporting millions of users during high-volume tax season.
- Designed modular, reusable component libraries following atomic design principles, improving maintainability, scalability, and design consistency across teams.
- Implemented advanced React performance optimizations — memoization (useMemo, useCallback, React.memo), lazy loading, and code splitting — reducing bundle size and improving Time-to-Interactive significantly.
- Built production-grade pages with Next.js leveraging SSR (getServerSideProps) and SSG (getStaticProps) for improved SEO, fast page loads, and optimal Core Web Vitals scores.
- Championed accessibility best practices (WCAG 2.1, ARIA), ensuring TurboTax flows met compliance standards and were usable for all users.
- Collaborated closely with UX/UI designers to translate Figma mockups into pixel-perfect, user-friendly React interfaces with attention to UX detail.
- Built a centralized orchestration layer with Spring Boot and Apache Kafka, reducing inter-service coupling by 40% in the supporting microservices ecosystem.
- Mentored junior frontend developers through code reviews, pairing sessions, and knowledge-sharing, fostering a culture of engineering excellence.
- Led production issue resolution using Splunk-based observability and root cause analysis, improving system reliability and on-call response times.

- Leveraged AI-assisted development tools (GitHub Copilot, Cursor IDE) to accelerate engineering workflows and improve code quality.

### **Senior Software Developer (Contract) | Naipunnya Welfare Services | Remote**

*Feb 2024 – Dec 2025*

- Led end-to-end React.js architecture and development of an Attendance Management System serving 6,000+ employees, eliminating manual errors and automating reporting workflows.
- Built a scalable, component-driven UI using React.js, TypeScript, React Hooks, Redux, Context API, and Material UI, following modern frontend best practices.
- Implemented comprehensive test coverage with Jest, React Testing Library, Mocha, and Enzyme — achieving high unit, component, and integration test coverage for critical workflows.
- Applied React performance techniques including code splitting, lazy loading, virtualization, and CDN strategies to ensure fast page load times and smooth UX.
- Implemented SSR and SSG with Next.js for enhanced SEO and faster initial page loads; used Next.js API routes for lightweight backend integrations.
- Enforced accessibility standards (ARIA attributes, semantic HTML) to meet WCAG guidelines and improve usability for all users.
- Configured and optimized Webpack and Babel for efficient module bundling, tree shaking, and build performance improvements.
- Built secure, scalable RESTful APIs with Node.js and Express.js incorporating JWT authentication, RBAC, rate limiting, logging, and caching, improving security and response times across high-traffic endpoints.
- Collaborated with designers, product managers, and backend teams to deliver end-to-end features aligned with business goals.

### **Senior UI Developer | Tata Consultancy Services (TCS) | India**

*Apr 2022 – Sep 2023*

- Led React.js architecture and development of a real-time airline flight operations platform enabling efficient planning, optimization, and rescheduling of flights to minimize passenger misconnections.
- Designed and implemented scalable state management using Redux and Context API; leveraged React Hooks for clean, functional component lifecycle management.
- Applied React performance optimization techniques including code splitting, memoization, lazy loading, virtualization, and Next/Image optimization across large data-heavy views.
- Implemented Next.js API routes to handle backend logic and server-side integrations with Node.js, enabling seamless data fetching strategies.
- Integrated RESTful APIs with React components ensuring data consistency, error boundaries, and high application reliability.
- Collaborated with UX designers and product owners to translate wireframes into responsive, cross-browser-compatible, accessible interfaces.
- Refactored Java Spring Boot report service with async processing, reducing report turnaround time and improving throughput under peak load.
- Deployed applications on AWS EC2 with CloudFront CDN and S3; implemented CI/CD pipelines using CircleCI and Jenkins for reliable, automated delivery.

### **Full-Stack Developer | Cognizant | India**

*May 2016 – Apr 2022*

- Spearheaded development of a virtual customer engagement platform for insurance agents featuring real-time collaborative form filling, video conferencing, and NLP — built with React.js, WebSockets, and GraphQL.
- Utilized GraphQL with Apollo Client to optimize data fetching patterns and eliminate over-fetching in complex React applications.
- Designed and built microservices with Node.js/Express, Python Flask, and Java Spring Boot; integrated AWS Lambda, API Gateway, DynamoDB, SQS, and SNS for scalable serverless solutions.
- Integrated Keycloak for SSO using JWT, providing centralized and secure authentication across multiple React front-end applications.
- Implemented Redis caching to significantly improve data retrieval speed and reduce server load in high-traffic scenarios.
- Enforced application security standards by integrating SAST, DAST, and vulnerability scanning within CI/CD pipelines (SonarQube).

**Senior Software Developer** | **UST Global** | India

*Feb 2015 – May 2016*

- Designed and supported healthcare web applications prioritizing reliability, performance, and SLA compliance in production environments.
- Served as key escalation point for high-priority production incidents; optimized application performance using ASP.NET and SQL Server.

**Software Engineer** | **QMIS Systems** | India

*Nov 2013 – Feb 2015*

- Built mortgage review systems using HTML5, ASP.NET, Knockout.js, SQL Server, and RDLC reporting; applied full SDLC best practices across the engagement.

**Software Developer** | **Innate IT Solutions** | Kochi, India

*Aug 2011 – Nov 2013*

- Designed a CMS website framework reducing developer time to launch new sites; built e-commerce platforms with payment gateway, payroll, and SMS/email integrations using C#, ASP.NET, SQL, and JavaScript.

## **EDUCATION**

---

**Bachelor of Technology – Computer Science and Engineering** | MG University, Kerala, India | 2008 – 2011

**Diploma – Computer Science and Engineering** | Government Polytechnic College, Kerala, India | 2005 – 2008
